

TeamQualityPro

See Everything

TeamQualityPro is a real-time integrated platform to evaluate the entire ecosystem of Application projects and development resources with drill down investigation into specific team activity. The dashboards present on demand information to make informed assessments from any location at any time.

TeamQualityPro is code agnostic and built on lean architecture. An organization can rapidly connect and define views, investigate teams and projects in each development phase from requirements through production. Industry standard critical measurements in CMMI, Code Complexity, Function points, Testing, Lines of Code, Defect analysis, Project progress, and Costs produce graphical and table formats for decision accuracy.

**Accurate Real Time
End to End Transparency**

Real Time Cost & Performance:

Corporate Boards and executives require application development teams to outperform in today's competitive world. AppDev is now a business growth driver which requires insight to contribute to corporate success.

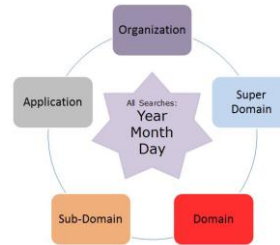

TeamQualityPro's core platform consolidates metrics and information from code quality, testing, personnel, outsourced teams, costs, and progress with a unified capability. The forecasting engine injects insight into each development phase to predict outcomes of any team.

Code Agnostic Solution:

TeamQualityPro is an integrated SaaS or On Premises solution created to encompass every platform and project.

Deployment is efficient and rapid. Extensions connect project code repositories regardless of coding language to the visual engine.

Metrics that make sense

Access to accurate costs and project progress impact are vital for business success. Visual and numerical insight into each project improves decisions and accelerates real time control.

In this market – the only choice is a platform designed with flexibility and deep functional process.

Impact	ScoreCard												
	2013-11-30			2013-12-31			2013-11-30			2013-12-31

TeamQualityPro

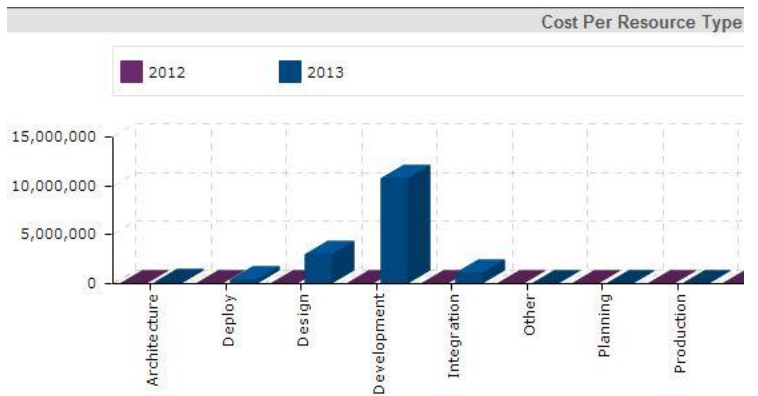

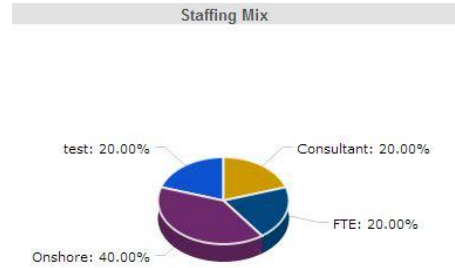

See Everything

At TeamQualityPro, we have unleashed the potential of robust integrated Graphics and Trends to quickly measure AppDev health and success to objective

Executive Dashboard Highlights

- Top 10 Best & Worst performers
- Testing: by release, monthly, modules, teams, and more
- Project Progress to Objective
- Code Quality Metrics: from Requirements to Production
- Accessible from Mobile and configurable notification system
- Defects: Individual Project / Team / Group / Drill Down
- Staffing Views: In-house to Out Source to Temps
- Costs: Evaluate personnel, phases, hours, defects at every phase, monthly, yearly and compare to previous
- Assess projects against industry benchmarks in CMMi, Cyclomatic Complexity, Function points
- Forecast and plan then analyze results to objective
- See evaluations Graphically or in Data charts

Instantly View mixture of Consultant, Off Shore, and FTE on all projects or by team

Defects: Compare All teams or one specific project
